Water Storage describes how to store water for home, farm, and small communities. It will help you design storage for just about any use, including fire safety and emergency, in just about any context—urban, rural, or village.

Water Storage: Tanks, Cisterns, Ponds & Groundwater

Rainwater harvesting is the accumulation and storage of rainwater for reuse on-site, rather than allowing it to run off. Rainwater can be collected from rivers or roofs, and in many places, the water collected is redirected to a deep pit (well, shaft, or borehole), a reservoir with percolation, or collected from dew or fog with nets or other tools. Its uses include water for gardens, livestock ...

Rainwater Harvesting - Solution to water crisis

Rainwater is a valuable natural resource that has been collected by Australian households for domestic use since colonial times. Opportunities for rainwater collection and use vary with location. Urban households typically have a connection to a reticulated, treated (mains) water supply but can significantly lower mains water usage by installing a rainwater harvesting system.

Rain is liquid water in the form of droplets that have condensed from atmospheric water vapor and then become heavy enough to fall under gravity. Rain is a major component of the water cycle and is responsible for depositing most of the fresh water on the Earth. It provides suitable conditions for many types of ecosystems, as well as water for hydroelectric power plants and crop irrigation.
