Design of Structural Glued Laminated Timber Columns

Wood Structural Design. Wood can be used in many popular structural forms from the light duty repetitive small structures to the larger and heavier framing systems used in commercial projects such as arenas or storage facilities.

structural timber - WPV

Timber has become a material of choice these days for construction because of its amazing strengths and properties. Owing to the demand, advances have been made in the way timber is used as its simple timber frame kit is being replaced by integrated construction solutions like cross laminated timber (CLT), glulam and SIPS.

Glued laminated timber, also called glulam, is a type of structural engineered wood product comprising a number of layers of dimensioned lumber bonded together with durable, moisture-resistant structural adhesives. In North America the material providing the laminations is termed laminating stock or lamstock.. By laminating a number of smaller pieces of lumber, a single large, strong ...

Soldier Pile and Lagging Design Requirements

The Design Commission has reviewed Framework, a Cross Laminated Timber building that is likely to become the tallest mass timber building in the USA. The 11 story, 142m²-2m³ tall building by Lever Architecture will include 31,260 sq ft of office space on levels 2 to 6, and 60 apartments on levels 7-11. The apartment units, operated by Home [€i]

Design Reviewed for High-Rise Timber Building Framework

A structural insulated panel, or structural insulating panel, (SIP), is a form of sandwich panel used in the construction industry.. SIP is a sandwich structured composite, consisting of an insulating layer of rigid core sandwiched between two layers of structural board, used as a building material. The board can be sheet metal, plywood, cement, magnesium oxide board (MgO) or oriented strand ...

SUSTAINABILITY . The Timber Bridge design consists of a floating platform and a pivoting mechanism that allows the bridge to open for larger vessels. Small vessels such as kayaks and sail boats will be able to pass

under at any time. The platform will rise and fall with the tide, protecting the bridge from flooding, while propulsion pontoons will help stabilize the structure.
