

digital signal processing with pdf

The most common processing approach in the time or space domain is enhancement of the input signal through a method called filtering. Digital filtering generally consists of some linear transformation of a number of surrounding samples around the current sample of the input or output signal. There are various ways to characterize filters; for example:

The Scientist and Engineer's Guide to Digital Signal

A digital signal processor (DSP) is a specialized microprocessor (or a SIP block), with its architecture optimized for the operational needs of digital signal processing.. The goal of DSP is usually to measure, filter or compress continuous real-world analog signals. Most general-purpose microprocessors can also execute digital signal processing algorithms successfully, but may not be able to ...

I've been reading this book to refresh my memory on digital signal processing. It is a good book, lots of theory in there, however it is a bit dry in its explanations, there are a lot of results (for example the value of a certain number series) that just are presented out of the blue while the reader scratches his head trying to come up with the missing steps.

Other recursive filter programs: rffr.c - Calculates the frequency response of a recursive filter using the coefficient file created by one of the above programs. rdf.c - Filters data from an input file, using a coefficient file generated by one of the above programs.. FIR Nonrecursive Digital Filters. A general nonrecursive filter is implemented as follows:
