This work proposes to give a systematic exposition of the fundamentals of algebraic geometry. It is now generally acknowledged that to obtain a theory of algebraic geometry as general as possible, it is necessary to reconsider the notion of schemes: we have tried in this Introduction to rapidly describe the evolution which has led to this notion.

of plane geometry; and the points, lines, and planes, the elements of the geometry of space or the elements of space. We think of these points, straight lines, and planes as having certain mutual relations, which we indicate by means of such words as "are situated", "between", "parallel", "congruent", "continuous", etc. The complete and exact description of these relations follows as a consequence of the axioms of geometry. These axioms may be arranged in five groups.
